# Camp Abilities Olympia Overview

Dear Camper and Parent/Guardian,

Camp Abilities Olympia is going to be here before you know it and we are looking forward to having you for the 5 day camp! There are a few things we want you to know before you come.

- 1) The cost of the camp this year is \$500. We have raised a lot of money but we are unable to fund the entire camp ourselves. Checks can be made out to Olympia Camp Abilities PC or you can make a \$500 donation on our website at [www.campabilitiesolympia.com](http://www.campabilitiesolympia.com) If you really want your child to attend this camp but have the financial concerns, please let me now. **NO child will be turned away because of financial concerns.**
- 2) Please read the list of items to bring to camp, and try to bring everything on the list.
- 3) Camp will involve a lot of sports, games, and activities throughout the day. If you have not been active very much this year, we advise you to become involved in some light to moderate activities like stretching, running, walking, jumping, swimming, and any other physical activities which you enjoy. We want you to be involved 100 percent of the time during the week, have tons of fun and not get hurt.

You will hopefully learn a lot and make new friends! Camp is easily one of the best week's of my life each year and I can't wait for camp to start!

If you have any questions, please do not hesitate to call.

Sincerely,

*Keith Edgerton*

# Sudden Cardiac Arrest Information Form

## **Athlete/Parent/Guardian Sudden Cardiac Arrest Symptoms and Warning Signs Information Sheet and Acknowledgement of Receipt and Review Form**

### **What is sudden cardiac arrest?**

Sudden cardiac arrest (SCA) is when the heart stops beating, suddenly and unexpectedly. When this happens, blood stops flowing to the brain and other vital organs. SCA doesn't just happen to adults; it takes the lives of students, too. However, the causes of sudden cardiac arrest in students and adults can be different. A youth athlete's SCA will likely result from an inherited condition, while an adult's SCA may be caused by either inherited or lifestyle issues. SCA is NOT a heart attack. A heart attack may cause SCA, but they are not the same. A heart attack is caused by a blockage that stops the flow of blood to the heart. SCA is a malfunction in the heart's electrical system, causing the heart to suddenly stop beating.

### **How common is sudden cardiac arrest in the United States?**

SCA is the #1 cause of death for adults in this country. There are about 300,000 cardiac arrests outside hospitals each year. About 2,000 patients under 25 die of SCA each year. It is the #1 cause of death for student athletes.

### **Are there warning signs?**

Although SCA happens unexpectedly, some people may have signs or symptoms, such as:

- fainting or seizures during exercise;
- unexplained shortness of breath;
- dizziness;
- extreme fatigue;
- chest pains; or
- racing heart.

These symptoms can be unclear in athletes, since people often confuse these warning signs with physical exhaustion. SCA can be prevented if the underlying causes can be diagnosed and treated.

### **What are the risks of practicing or playing after experiencing these symptoms?**

There are risks associated with continuing to practice or play after experiencing these symptoms. When the heart stops, so does the blood that flows to the brain and other vital organs. Death or permanent brain damage can occur in just a few minutes. Most people who experience SCA die from it.

### **Public Chapter 325 – the Sudden Cardiac Arrest Prevention Act**

The act is intended to keep youth athletes safe while practicing or playing. The requirements of the act are:

- All youth athletes and their parents or guardians must read and sign this form. It must be returned to the school before participation in any athletic activity. A new form must be signed and returned each school year.

*Adapted from PA Department of Health: Sudden Cardiac Arrest Symptoms and Warning Signs Information Sheet and Acknowledgement of Receipt and Review Form. 7/2013*

- The immediate removal of any youth athlete who passes out or faints while participating in an athletic activity, or who exhibits any of the following symptoms:
  - (i) Unexplained shortness of breath;
  - (ii) Chest pains;
  - (iii) Dizziness
  - (iv) Racing heart rate; or
  - (v) Extreme fatigue; and
- Establish as policy that a youth athlete who has been removed from play shall not return to the practice or competition during which the youth athlete experienced symptoms consistent with sudden cardiac arrest
- Before returning to practice or play in an athletic activity, the athlete must be evaluated by a licensed medical doctor or an osteopathic physician. Clearance to full or graduated return to practice or play must be in writing.

*I have reviewed and understand the symptoms and warning signs of SCA.*

# CONCUSSION INFORMATION FORM

A concussion is a brain injury and all brain injuries are serious. They are caused by a bump, blow, or jolt to the head, or by a blow to another part of the body with the force transmitted to the head. They can range from mild to severe and can disrupt the way the brain normally works. Even though most concussions are mild, **all concussions are potentially serious and may result in complications including prolonged brain damage and death if not recognized and managed properly.** In other words, even a “ding” or a bump on the head can be serious. You can’t see a concussion and most sports concussions occur without loss of consciousness. Signs and symptoms of concussion may show up right after the injury or can take hours or days to fully appear. If your child reports any symptoms of concussion, or if you notice the symptoms or signs of concussion yourself, seek medical attention right away.

## **Symptoms may include one or more of the following:**

- Headaches
- “Pressure in head”
- Nausea or vomiting
- Neck pain
- Balance problems or dizziness
- Blurred, double, or fuzzy vision
- Sensitivity to light or noise
- Feeling sluggish or slowed down
- Feeling foggy or groggy
- Drowsiness
- Change in sleep patterns
- Amnesia
- “Don’t feel right”
- Fatigue or low energy
- Sadness
- Nervousness or anxiety
- Irritability
- More emotional
- Confusion
- Concentration or memory problems (forgetting g
- Repeating the same question/comment

## **Signs observed by teammates, parents and coaches include:**

- Appears dazed
- Vacant facial expression
- Confused about assignment
- Forgets plays
- Is unsure of game, score, or opponent
- Moves clumsily or displays in coordination
- Answers questions slowly
- Slurred speech
- Shows behavior or personality changes
- Can’t recall events prior to hit
- Can’t recall events after hit
- Seizures or convulsions
- Any change in typical behavior or personality
- Loses consciousness

## **What can happen if my child keeps on playing with a concussion or returns too soon?**

Athletes with the signs and symptoms of concussion should be removed from play immediately. Continuing to play with the signs and symptoms of a concussion leaves the young athlete especially vulnerable to greater injury. There is an increased risk of significant damage from a concussion for a period of time after that concussion occurs, particularly if the athlete suffers another concussion before completely recovering from the first one. This can lead to prolonged recovery, or even to severe brain swelling (second impact syndrome) with devastating and even fatal consequences. It is well known that adolescent or teenage athletes will often fail to report symptoms of injuries. Concussions are no different. As a result, education of administrators, coaches, parents and students is the key to student-athlete’s safety.

For current and up-to-date information on concussions you can go to <http://www.cdc.gov/ConcussionInYouthSports/>

## YOUTH CAMPER INFORMATION

Camper Name: \_\_\_\_\_

We would like to have as much information on your child's visual impairment as well as any other information on any other disability your child may have. Please take the time to answer the questions below. This will be beneficial for the counselors and specialists working with your child to understand their needs better as well as to collect information for the research that will take place this year at Camp Abilities Olympia.

Please check which classification your child falls into:

\_\_\_\_\_ **Class B1:** No light perception in either eye up to light perception, but inability to recognize the shape of a hand at any distance or in any direction.

\_\_\_\_\_ **Class B2:** From ability to recognize the shape of a hand up to visual acuity of 20/600 and/or a visual field of less than 5 degrees in the best eye with the best practical eye correction.

\_\_\_\_\_ **Class B3:** From visual acuity 20/600 and up to visual acuity of 20/200 and/or a visual field of less than 20 degrees and more than 5 degrees in the best eye with the best practical eye correction.

\_\_\_\_\_ **Class B4:** From visual acuity above 20/200 and up to visual acuity of 20/70 and a visual field larger than 20 degrees in the best eye with the best practical eye correction.

**Please list diagnosis, limitations, and if any adaptations are needed:** \_\_\_\_\_

**Please answer the following questions: Please use the space provided only if you need to provide additional information. Please be as specific as possible!**
